

1. Open the directory where the CLI script is located.
2. Open execute.sh (linux/osx) or execute.bat (windows) file and you'll see a list of command line arguments.
 - a. **--host** Put the address of the zeuz server here (including the port if it's running on anything other than port 80/443).
 - b. **--api_key** Put the api key here. You can obtain it by going to *MENU > Username > Profile* menu item.

Go to the *Api Key* tab. If an API key is already generated, copy it otherwise click on *Generate Api Key* button to generate a new one and copy it.

- c. **--test_set_name** Specify the name of the test set that you want to deploy (a test set is a collection of test cases). Get the test set name by navigating to *MENU > Testing > Set*

- h. **--machine** Specify the ID of the machine in which Zeuz Node will run the test cases.

- i. **--milestone** Specify the milestone ID. *MENU > Project > Milestone*

The screenshot shows a web browser at zeuz.zeuz.ai/Home/ManageMilestone/. The navigation bar includes links for Testing, Project, and Admin. The main section is titled "Milestones Search & Filter" and contains a search bar. Below the search bar, it indicates "Searched By: 3 Milestones". A table lists the milestones:

Id	Title	Description
7617	May 2020	May 2020
7718	IPB5 - May Items	IPB5 - May Items
7704	July 2020	July 2020

At the bottom of the table, there are pagination controls: "Prev", "1", and "Next". A red arrow points to the row with ID 7704.

- j. **--machine_timeout** [minutes] Specify how many minutes to retry for the given machine to be available (it's free, not executing any test cases).
- k. **--report_timeout** [minutes] Specify how many minutes to wait for a deployment to finish (execute all test cases) before exiting the script. The script will exit and report early if the execution is done sooner.
3. Execute the script `./execute.sh` (linux/osx) or `.\execute.bat` (windows)
